How to make
climate action
understandable?

Temperature anomalies

CO₂ Emissions Are Still Rising

Human-caused greenhouse gas emissions had appeared to be leveling off, but new research shows 2017 is headed for a new high. The future projections show how emissions levels translate to temperature rise.

FOSSIL FUEL AND LAND-USE CO₂ EMISSIONS

In gigatons, with corresponding temperature rise, projected to 2100

Assignment 1

1. Find **two different visualizations** (on the internet, in newspapers, TV, etc.). Different means, e.g., a line chart, a node-link diagram.
2. For each visualization, **describe three faults** and why they are problematic. Make sure to report different faults for each visualization, i.e., in total you should report six faults.
3. For each visualization, propose (sketch) one or two visualizations that solve the identified faults.
4. For each solution you find, argue with a more general visualization guidelines.

Tips

- Collect many visualizations
- Chose the most challenging one
- Create several solution
- **Don't rely on Google Images!!!**

○ <https://informationisbeautiful.net/>

Too simple:

GLOBAL CO₂ LEVELS

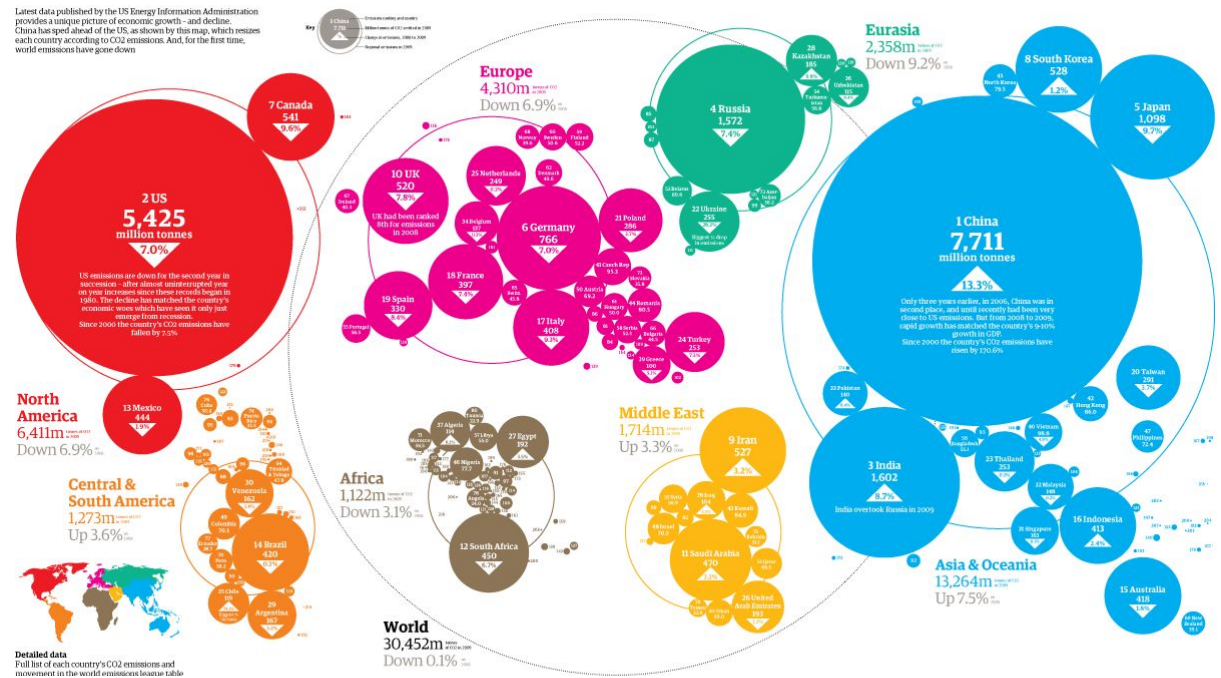

Click and drag in the plot area to zoom in

Too complex:

An atlas of pollution: the world in carbon dioxide emissions

Latest data published by the US Energy Information Administration provides a unique picture of economic growth – and decline. China has stepped ahead of the US, as shown by this map, which resizes each country according to CO₂ emissions. And, for the first time, world emissions have gone down.

How Do We Get to Zero Greenhouse Gas Emissions?

Good:

Emissions from where they are used, not where they are produced.

Halving by 2030	gigatonnes reduced per year
increased solar energy	-11
widespread wind energy	-14
other renewables	-0.7
better recycling of raw materials	-3.2
less materials to make the same things (product materials efficiency)	-1.0
disassembling old products to make new ones (circular business models)	-1.1
waste reduction in production of steel, plastics and other industrial materials	-1.9
reduced use of refrigeration gases (CFCs and HFCs)	-1.6
low-carbon heating and cooling	-2.1
low-carbon construction	-0.9
retrofitting buildings with better insulation, energy efficient lighting, etc.	-1.5
automation of temperature and lighting	-0.4
electric vehicles	-1.3
increased use of public transport	-0.7
bikes, car-sharing, scooters	-0.5
more efficient shipping of goods with reduced air transport	-1.0
low-emission trucks	-0.5
halting deforestation, planting trees	-2.0
sustainable agriculture techniques	-0.9
plant-based diets	-1.7
reduced food waste	-0.7
other measures	-0.9
EMISSIONS REMAINING	24.3

Tutorial 2: Data Collection

- Collect yourself
 - Gather from the internet
 - Obtain from agency..
-
- Waste / weather / climate
 - Deforestation
 - News events
 - Personal usage
 - Positive action

What makes a **good** visualization?

Wrong sizes

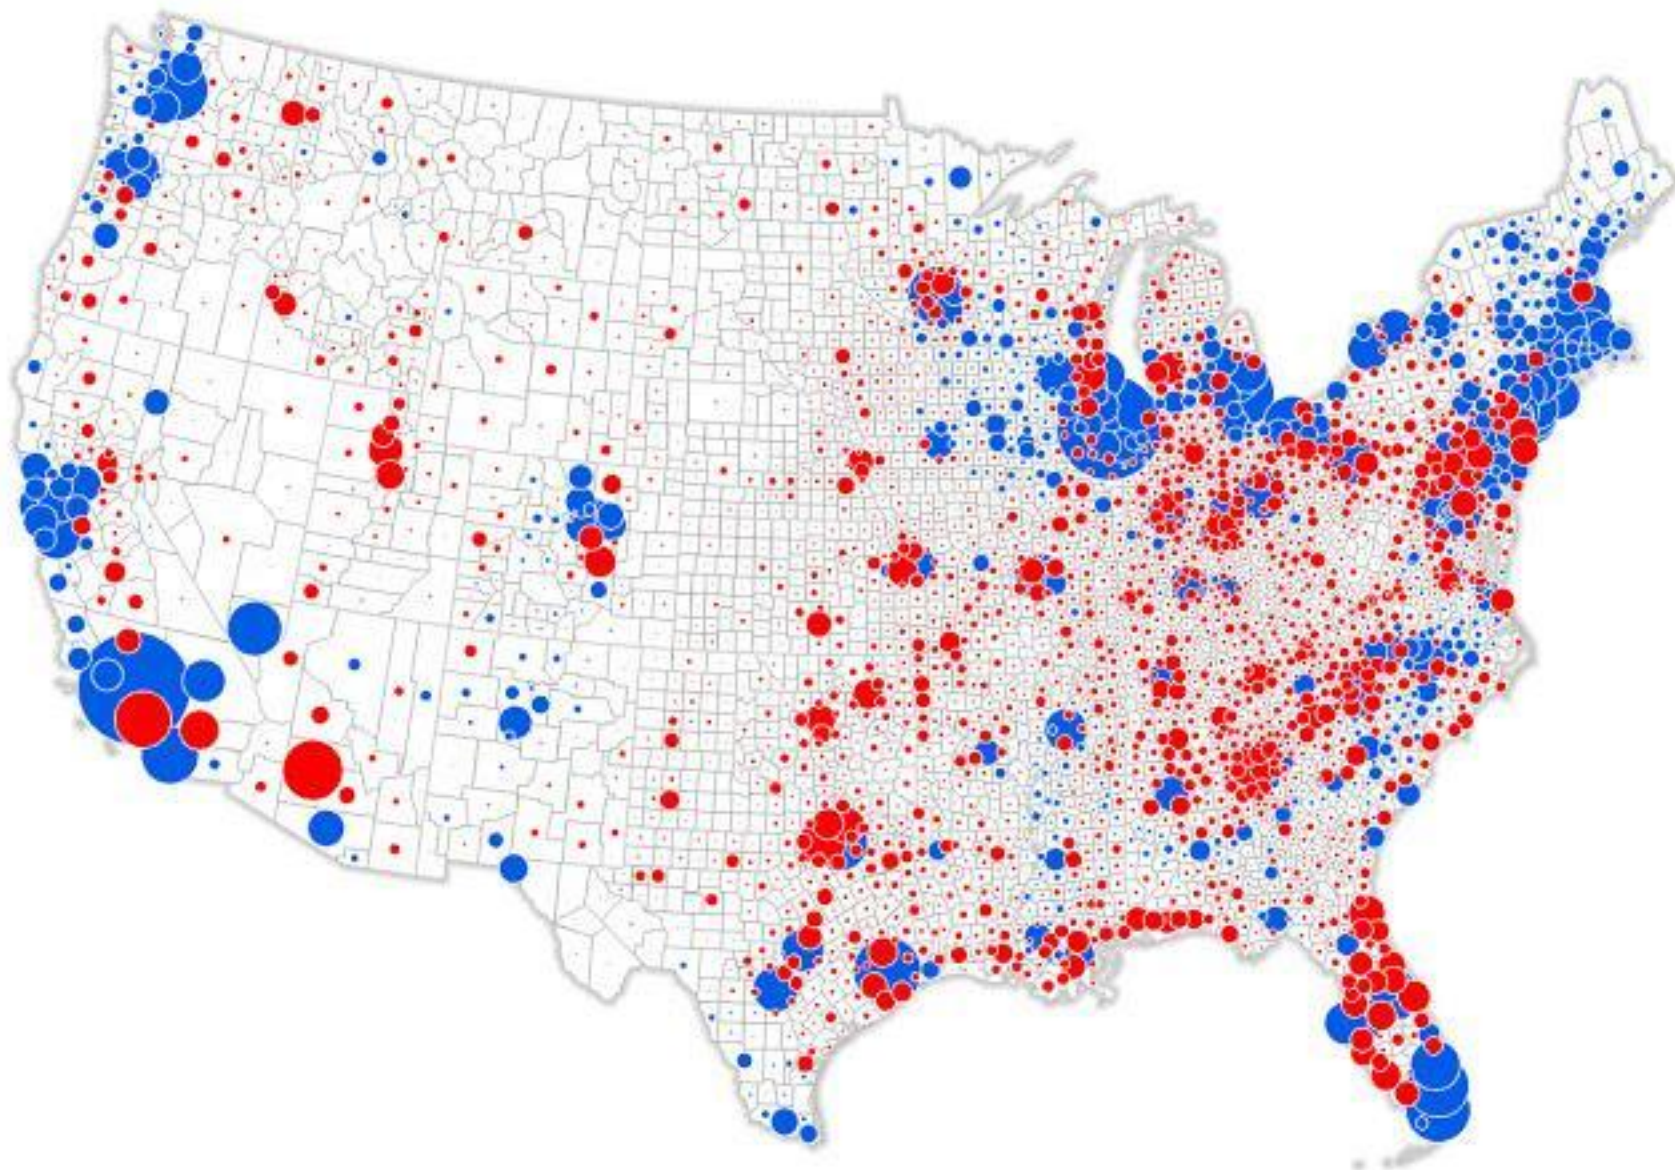

Control

vs.

Deceptive

Guideline #1

"Don't use area size to compare quantities."

Exception: *It can work on maps.*

Truncated Axes

Control

vs.

Deceptive

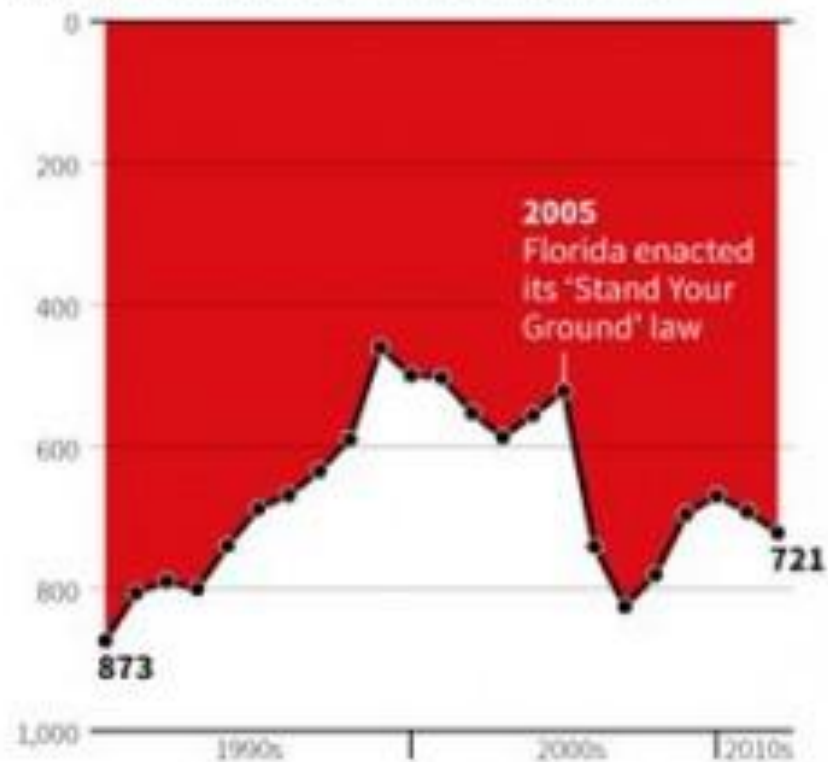

Guideline #2

"Don't truncate chart axes."

Exception: *Except you tell the reader.*

THE VERGE

Guideline #4

"Be true about your intention."

Exception: none

Common flaws (from 8 graphics only..)

1. Missing **scales**
2. **3D** distortion
3. **3D** occlusion
4. Missing **color** contrast
5. **Colors** are too similar
6. Not B/W safe
7. overuse of **texture**
8. **Volume** as visual variable
9. Un-proportional **mappings**
10. Truncated **axes**
11. Missing **titles**
12. Missing axis **labels**
13. Unnecessary shapes/**ink**
14. Incomplete **data**

1. Wrong **legends**
2. Bad visual **mappings**
3. **Uncommon** / unknown design choices
4. Too much **clutter**
5. **Misplaced** data points
6. Long lines, which are hard to follow
7. Missing **legends**
8. **Too much** information in one graphic
9. **Missing** descriptions
10. **Overlapping** graphical elements
11. **Too many** charts in one

$$\text{Data-Ink Ratio} = \frac{\text{Data-Ink}}{\text{Total Ink used to represent the graphic}}$$

Calories per 100g

Data-ink ratio

Calories per 100g

Guideline #5

"Try to optimize your data-ink ratio"

Exception: ...

Embellishment: Metaphors

Embellishment

≠

Metaphor

Distractors

Embellishment

Understanding of embellished charts not worse, but recall after some weeks, much higher.

What makes a chart memorable?

What makes a chart memorable?

Top 10 most memorable: top-left to bottom right for each category.

What makes a chart memorable?

- Color
- Human recognizable objects
- Low data-ink ratio
- Unique visualization types < common graphs

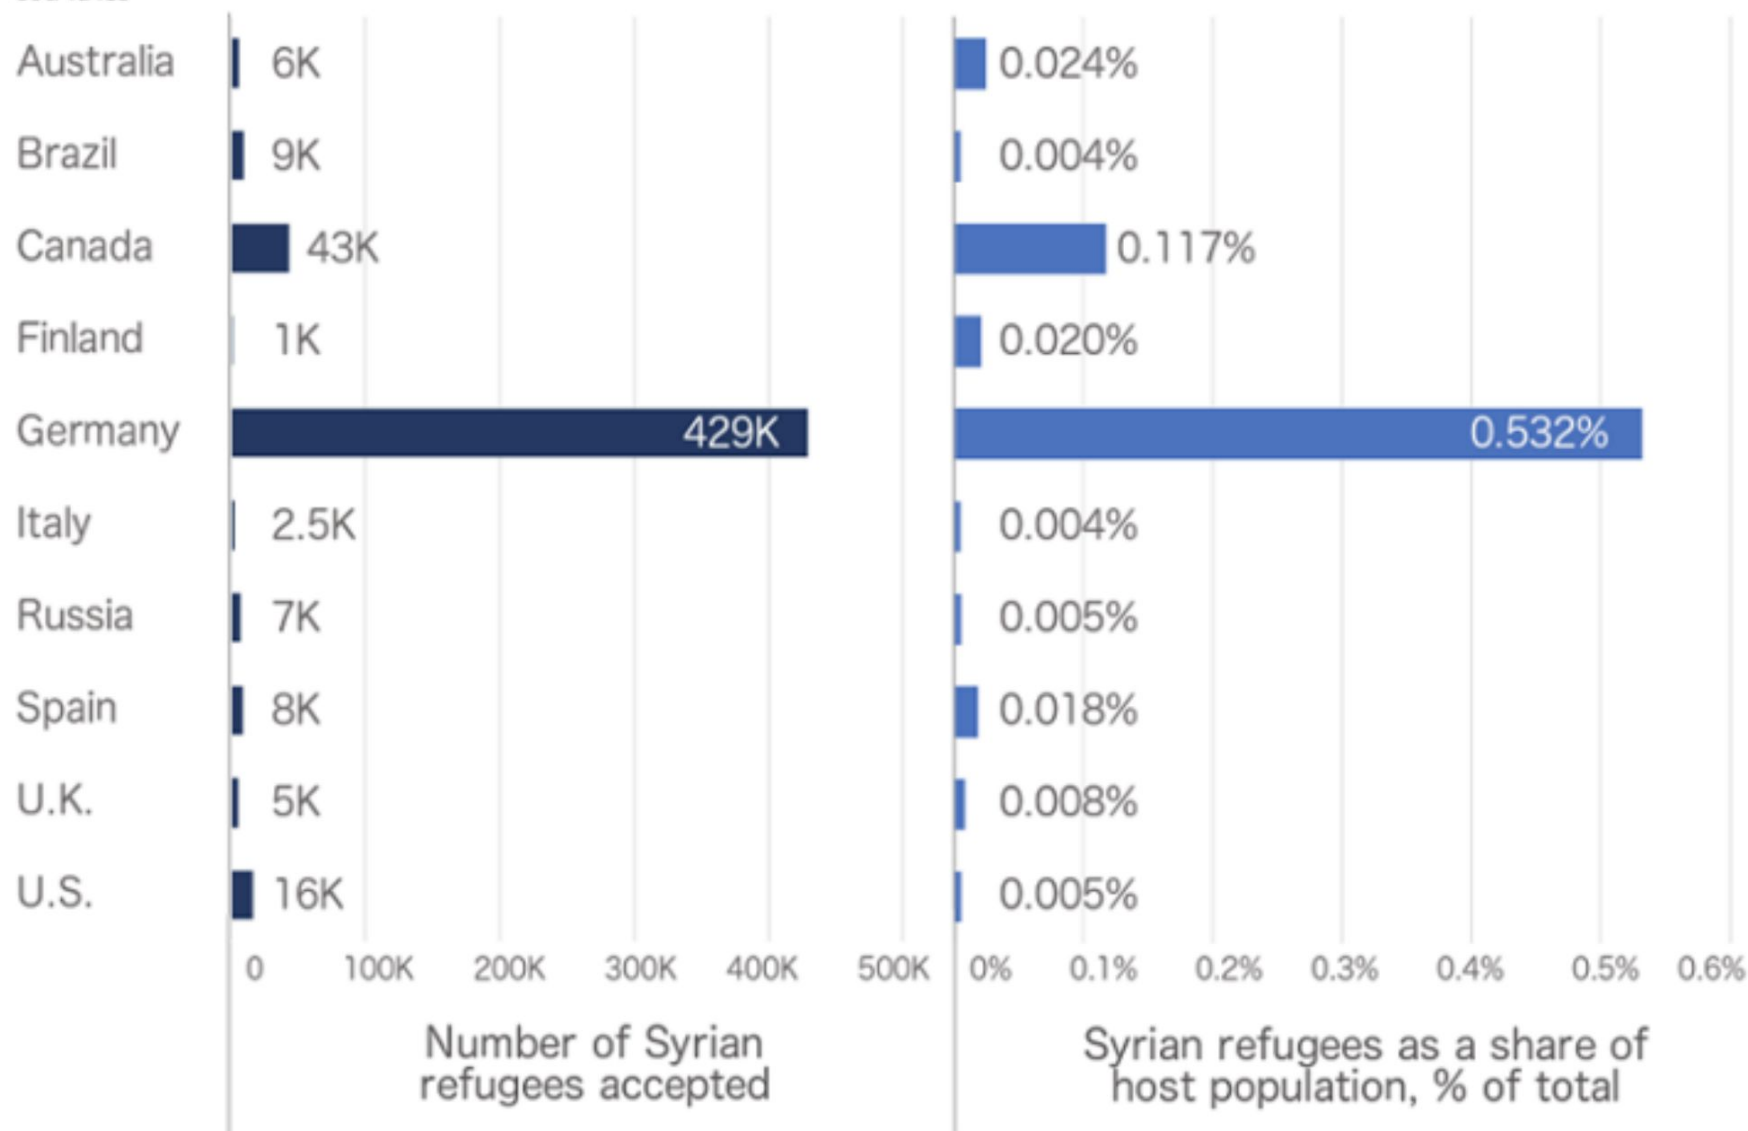

Guideline #6

"Add embellishment carefully to make your graphic memorable and enjoyable"

Exceptions: Unless it clutters your visualization and obstructs the message.

Letting in Potential Killers?

Non-neighboring
countries

We must do our share!

Non-neighboring
countries

Syrian Refugee Distribution:

Non-neighboring
countries

Guideline #7

"Chose a title appropriate to your message or data — it will prime your reader."

Exceptions: none

Highlight

Message

New marriage rate by education

Number of newly married adults per 1,000 marriage eligible adults

Guideline #8

"Highlight what is important "

Exceptions: except you have too many important things to say:

Solution: show another chart (can be the same)

Layout

Demonstrating effectiveness is most important consideration when selecting a provider

In general, what attributes are the most important to you in selecting a service provider?
(Choose up to 3)

Survey shows that demonstration of results is the single most important dimension when choosing a service provider.

Affordability and experience working together previously, which were hypothesized to be very important in the decision making process, were both cited less frequently as important attributes.

Data source: xyz; includes N number of survey respondents. Note that respondents were able to choose up to 3 options.

Layout

Demonstrating effectiveness is most important consideration when selecting a provider

In general, **what attributes are the most important** to you in selecting a service provider?

(Choose up to 3)

% selecting given attribute
0% 20% 40% 60% 80%

Demonstration of results
Content expertise
Local knowledge
National reputation
Affordability of services
Previous work together
Colleague recommendation

Survey shows that **demonstration of results** is the single most important dimension when choosing a service provider.

Affordability and **experience working together previously**, which were hypothesized to be very important in the decision making process, were both cited less frequently as important attributes.

Data source: xyz; includes N number of survey respondents.
Note that respondents were able to choose up to 3 options.

Guideline #9

"Annotate what is important"

Exceptions: ?

What you show

What I think some people see

What the cone is based on

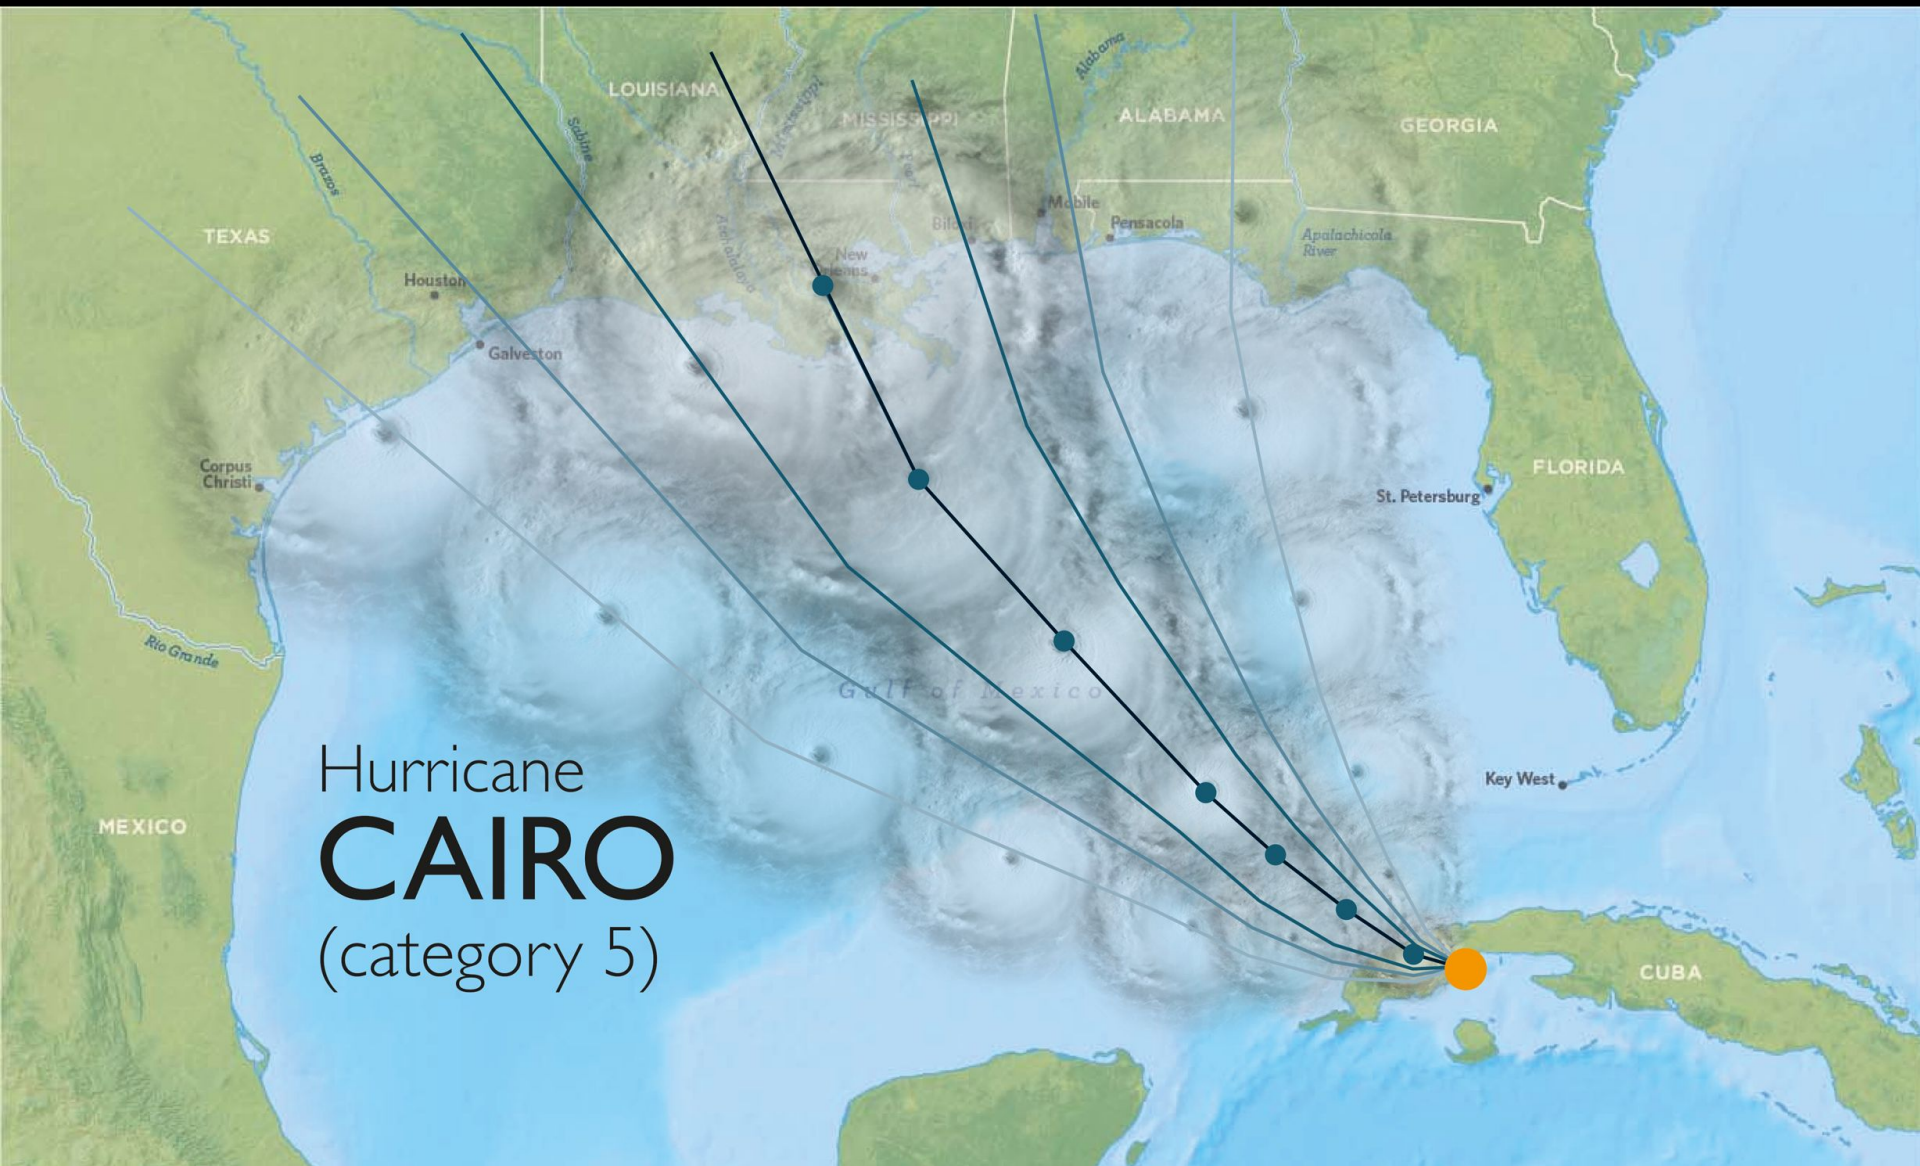

What non-scientists are not aware of (cone is just 66% probability)

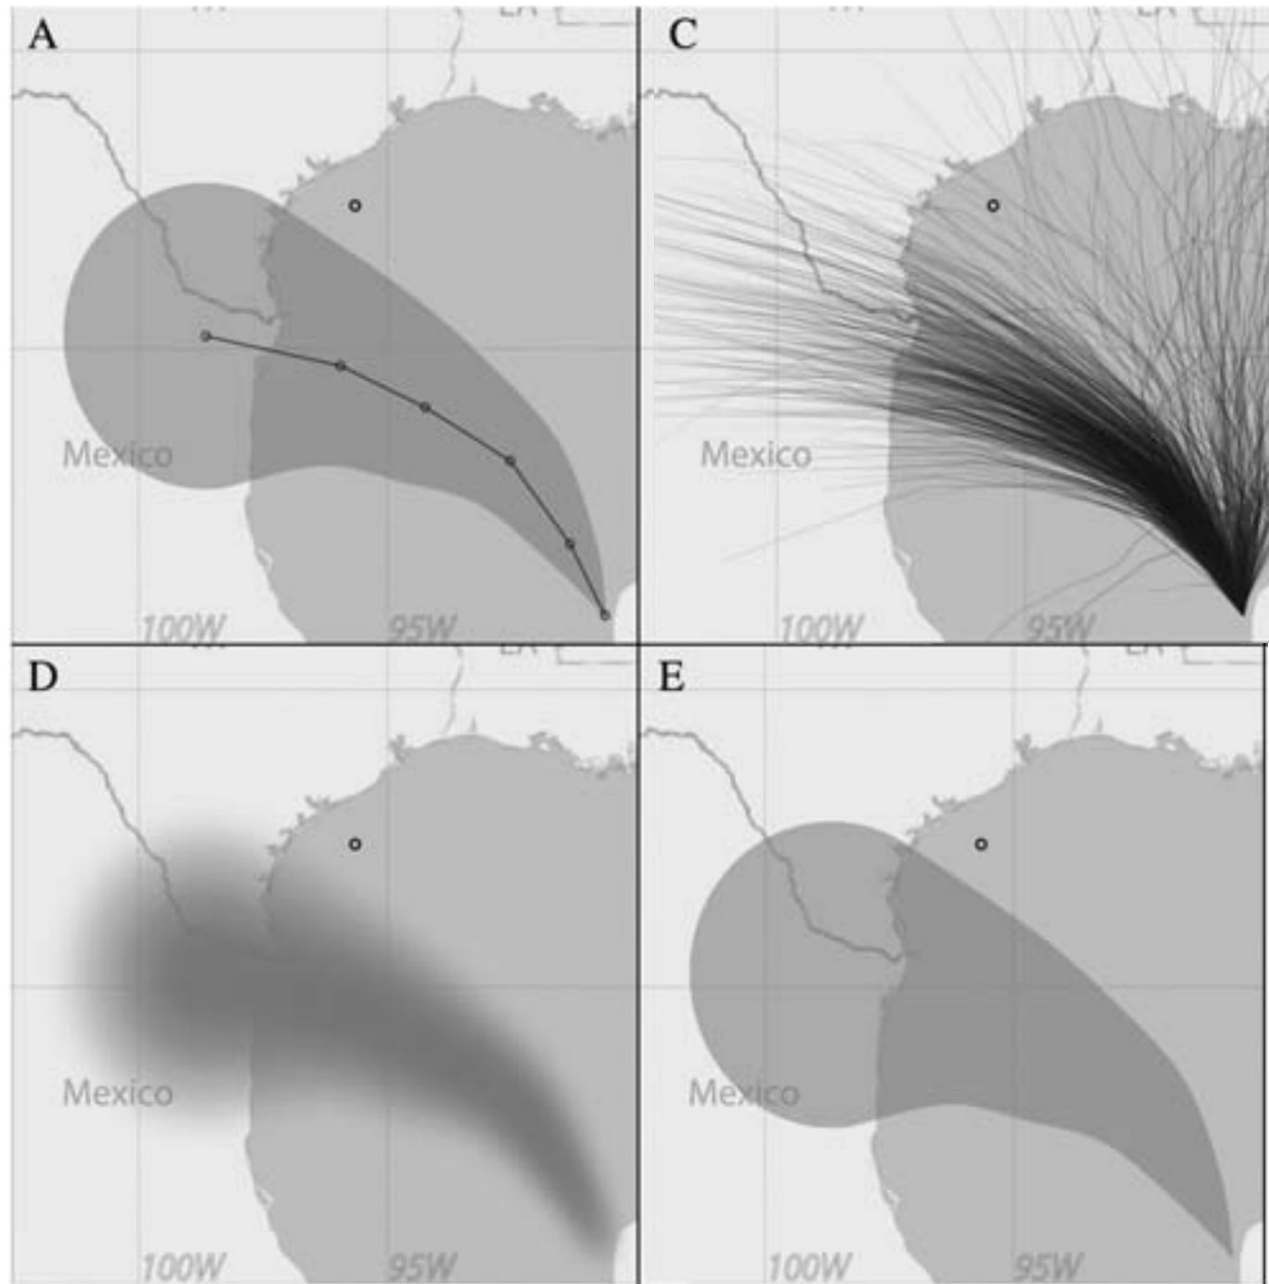

Hurricane
CAIRO
(category 5)

What we could be showing instead

What all this may mean!

Uncertainty

Ruginski et al,: Non-expert interpretations of hurricane forecast uncertainty visualizations, 2012

Uncertainty

Guideline #10

"Be clear about uncertainty"

Exceptions: you are sure about it.

Balancing design

Familiarity vs. unfamiliarity

Clarity vs. Memorability

Novelty vs. Tradition

Facts vs. Uncertainty

Reader-driven vs. Author-driven

...

Closing Quotes

Nigel Holmes states: *“As long as the artist understands that the primary function is to convey statistics and respects that duty, then you can have fun (or be serious) with the image; that is, the form in which these statistics appear.”*

Alberto Cairo calls a Functional Art: *“something that achieves beauty not through the subjective, freely wandering self-expression of the painter or sculptor, but through the careful and restrained tinkering of the engineer.”*
